We are an award winning design agency based in Glasgow & London, helping organisations produce great services by putting people first.

SNOOK | HOW WE

We’re on a mission to make services better everywhere

From helping people bank more easily to looking after their health, from travelling on holiday to making sure their house always has power.

We work with organisations to ensure the services they provide enable people to do get things done easily, so they always choose you first and receive the service they need.

SNOOK | THINKING

How we think about customer experience
How we think about customer experience

Joined up channels
We ensure touchpoints line up across all channels for the customer and are efficiently delivered.

Customer centred
We research and understand how people experience your service in order to improve it.

End-to-end experience
We map end-to-end journeys and ensure customers can easily transact with you.

We explore business processes in alignment with what people experience

We go front to back, end to end, across all channels to make sure how you deliver a service from the inside matches up with what happens on the outside.

We go to the detail. We research how your data and information flows through your business to how this ends up in front of the customer. We map how all your systems relate, what technology you use in line with each stage of the user experience.
We go front to back, end to end, across all channels to make sure how you deliver a service from the inside matches up with what happens on the outside.

We go to the detail. We research how your data and information flows through your business to how this ends up in front of the customer. We map how all your systems relate, what technology you use in line with each stage of the user experience.

Grounded by user research

Designing a service requires that we understand customers, sometimes referred to as ‘service users’.

We spend time researching in homes, work places and on the street to understand what they need and how they like to access it.

Staff are service users too. We spend time researching internal systems to understand if how the service being delivered can be improved and made more efficient.

This project aims to explore the user understanding, capacity, architecture, technology and the process.
This project aims to explore the user understanding, capacity, architecture, technology and the process involved in guiding a user who has failed to gain a digital identity with GOV.UK Verify to a Timpson shop (ArkHive, Max Spielmann) to enable the best chance of successful identity verification.

“PEOPLE WHO CAN NOT ACHIEVE LOA2 FOR A DIGITAL IDENTITY USING THE GOV.UK VERIFY PROCESS ONLINE, CAN ACHIEVE LOA2 WITH SUPPORT OF A HIGH ST VENDOR.”

- Innovate Identity, Rob Laurence
Government services you can use with GOV.UK Verify

You can only use GOV.UK Verify when you need to access one of the following services.

- Check your Income Tax for the current year, with Her Majesty’s Revenue and Customs (HMRC)
- Get a State Pension statement, with the Department for Work and Pensions (DWP)
- Sign in to your personal tax account (HMRC)
- View or share your driving licence information, with the Driver and Vehicle Licensing Agency (DVLA)
You can only use GOV.UK Verify when you need to access one of the following services.

- Check [your income tax](https://www.gov.uk/guidance/check-your-income-tax-for-the-current-year) for the current year, with Her Majesty's Revenue and Customs (HMRC)
- Get a [State Pension statement](https://www.gov.uk/guidance/get-a-state-pension-statement), with the Department for Work and Pensions (DWP)
- Sign in to your personal tax account (HMRC)
- View or share your driving licence information, with the Driver and Vehicle Licensing Agency (DVLA)
- Apply for [Universal Credit](https://www.gov.uk/guidance/applying-for-universal-credit) (DWP)
- [Claim for redundancy and monies owed](https://www.gov.uk/guidance/claim-for-redundancy-and-monies-owed), with the Department for Business, Innovation and Skills (BIS)
- [Update your rural payments details](https://www.gov.uk/guidance/update-your-rural-payments-details), with the Department for Environment, Food and Rural Affairs (Defra)
- Help [friends or family with their tax](https://www.gov.uk/guidance/help-friends-or-family-with-their-tax) (HMRC)
- Check or update your [company car tax](https://www.gov.uk/guidance/check-or-update-your-company-car-tax) (HMRC)

**SNOOK | WHY USERS MAY FAIL**

There could be a **number of reasons** why a user would not have been able to successfully complete the process such as:

- We could not **match your details** with some external records.
- You were **not able to provide details** of both your passport and driving license.
- One or more **incorrect answer** were provided.

Through providing a **physical copy** of your passport or driving license we can reduce the number of other checks we need to perform and hence increase the chance of successfully completing your registration.
User research main objectives

- Understand the user's capacity to complete an application in a face to face environment.
- Understand the barriers facing High Street colleagues to be able to offer this as an additional service.
- To consider the risks to the Verify process in a step out channel.
- Understand the commercial value in a face to face element of GOV.UK Verify process.

Methodology

- Two stages of user research allowing for iteration
- 16 participants over four user research days in two in-store locations

  • Introductory Phone Call: Initial call to explain research process and introduce GOV.UK Verify, book in time slot for store visit, and make clear what documents are required.
  • Follow up email: GOV.UK Verify introduction video and pre-store visit digital information.
  • Email from IDP: ‘Sorry we have not been able to complete your GOV.UK Verify assessment. We moved to a different branch’

Persona matrix

Technically able users were less concerned about security issues. Users who were less technically able were more skeptical.
Insights from user research

The user is comfortable with this service in a face-to-face environment

13 out of 16 users stated that they were comfortable with providing identification documents in store.

"Yes, my driving license and passport!"
The user is comfortable with this service in a face-to-face environment

13 out of 16 users stated that they were comfortable with providing identification documents in store.

“Absolutely fine as a lot of places tend to ask for that sort of thing [providing identification documents] for a government service like this so I felt secure” – Emma, 41

“The main reasons being:
- Users are used to providing identification documents for this type of service
- Users could see their documents at all times

“Yes, my driving license and passport I have no issue sharing it as you use it for lots of different reasons. My passport I don’t like to carry around and use as much as I see it as more valuable and I see it as the core identity document.” – Jon, 47

Users often felt that handing over their passport was slightly more uncomfortable than handing over their driving licence.
Users felt some annoyance at being required to come in store

“Initially it would have been a pain, but I feel more comfortable doing it in a face-to-face environment. Although it is more hassle this is the next logical step to be able to successfully verify your identity.” – Gillian, 34

- Most users said that they would have felt some level of annoyance.

- However, after going through the in-store service experience, they agreed it was not a huge inconvenience. Locality and an efficient service meant that users reacted positively to the experience.

- Users also commented that this is how many other online services work so it was not unexpected.

Users were not surprised to have failed the digital identity verification

“\textit{I would have potentially not been surprised to fail online. It was clear why I had to as it had not have worked. It is the next logical step for proof.}” – Gillian, 34.

Users were concerned why they had not been verified successfully online.

“I\textit{ was a bit worried that I was not verified online but was pleased I could just come into the store. Things can happen due to technical faults so I was happy that it could be rectified in store}.” – Nicola, 30

Some users stated that they would not have been surprised to have an issue with the digital verification service as they had experience with this sort of problem.
“I would have potentially not been surprised to fail online. It was clear why I had to as it had not have worked. It is the next logical step for proof.” — Gillian, 34.

Users were concerned why they had not been verified successfully online.

“I was a bit worried that I was not verified online but was pleased I could just come into the store. Things can happen due to technical faults so I was happy that it could be rectified in store” — Nekeshia, 26

---

**SNOOK | PROVIDING IDENTIFICATION DOCUMENTS**

**Important that users can see their documents at all times**

The main aspect that made this service better than the other similar services, according to users, was that you could always see your documents and it was more of a collaborative process.

“He only had it for 30 seconds, I was pleased because if you lose something like that it would be a disaster, so it was good that I could see what he was doing.” — Emma, 41

---

**SNOOK | THE FACE TO FACE SERVICE**

**Collaborative process builds security for the user**

...
Collaborative process builds security for the user

The process being open and transparent makes it easier for the colleague to explain what is going on – all right in front of the user.

“I think it’s useful. I think without the screen I could have followed it but quite often there was more information on screen. Equally if you have someone that can follow it if this is not your first language that’s useful.” – John, 36

“I feel better looking at it together so they can read it through as I explain” – Timpson colleague

Prompts build confidence for the Timpson’s colleague

Having a customer facing service made it far easier for the colleague to explain the process with the help of visuals and printed materials.

“It felt quicker and less formal having the customer seeing the screen. In general I prefer it this way as they can read and listen to what I am saying” – Timpson colleague

“Personally I like being sat next to the customer as I feel it is better, as there is no barrier between you and the customer. It’s easier to connect to the customer this way and can be seen as less formal” – Timpson colleague

The disparity between length of service wanted from the colleague and user

Colleagues initially thought that the service should be as quick as possible. Users often needed the service and were sometimes frustrated by the process not matching their expectations.
So straight forward I could do it myself

Users started to question why they have to do it in store or why they need help from a store colleague. A user suggested that they could just have desks in store and colleagues around if they needed help.

“If anything I could probably have sat at a desk in store and done it myself. It was that straightforward. That would have been good. However if there was still someone around if you had a problem, that would have been good too” - Jon, 47

Some users felt more secure in store than online
Some users felt more secure in store than online

A small group of users felt safer in store as they felt they had a better chance of verification and someone there to ask questions to or help if something did not work.

"I feel more secure having done it in store rather than purely online. It makes me feel better having the physical image being taken and being in a physical place" - Robin, 47

Users want the option of being able to go in store for the full service, however this is more for assisted digital reasons than security.

Users uncomfortable due to...

A distrust in digital

Users that are generally not very technically able and don’t trust technology would not use the digital service from the beginning.

"I guess from being a bit of a digital dinosaur I'm just a bit wary of sharing information, personal information and I would rather do things face-to-face. I do online banking but that's about it." - John, 36

A distrust in the Timpson colleague

Three users out of 16 that stated that they did not feel comfortable because they believed that the Timpson’s colleagues could have access to their data.

"I feel most uncomfortable around the Timpson staff as they have all my documents to carry out identity theft." – David, 44
"I guess from being a bit of a digital dinosaur I'm just a bit wary of sharing information, personal information and I would rather do things face-to-face. I do online banking but that's about it." – John, 36

"I feel most uncomfortable around the Timpson staff as they have all my documents to carry out identity theft." – David, 44
Trust in the service

The users trust is transferred through the service from GOV.UK

“I was faced with a problem and this is the number of the brands within the process, that I don’t know. However they are all connected with GOV.UK so I trust them and it’s a solution. I just need this situation resolved. GOV.UK has that reassuring sense. SecureIdentity and ArkHive are organisations that I don’t know but as I have been led through the process from GOV.UK I trust them.” - David, 44

Timpson brand brings trust to in store service for users

Timpson’s has been around for over 150 years and many users of varying ages have trust in its staff and identity.

“There is no difference with this service from them copying my front door key. There is trust with Timpson’s.” - Robin, 47

Understanding of the service

Users often were supportive of the service idea and understood the need.

“Secure service that will ultimately save time going forward doing identity checks in the future” – Emma, 41

The overall service is seen as a two or three stage process

“First stage online, second stage in store, third stage verification completion” – Katherine, 31

Users were pleased the service was quicker than expected

Most users predicted it would take between 15 – 30 minutes, the most common time expectation was 20 minutes. The in store service on average took approximately 6 minutes and 30 seconds end-to-end.

“I thought that the in store service would take longer, around 20 minutes but it took about 5 which was great.” – James, 38
Understanding of the service (continued)

An ArkHive account was a familiar concept to most users.
Some users likened the ArkHive account to a cloud, a secure google drive or dropbox. This concept familiarity helped users to feel comfortable and trust the concept.

Users don’t want further in store assistance
“I would not want further assistance, I would want to sit at home and look through it all and how it is displayed and things” – Emma, 41
An ArkHive account was a familiar concept to most users.
Some users likened the ArkHive account to a cloud, a secure google drive or dropbox. This concept familiarity helped users to feel comfortable and trust the concept.

“Its an online document storage folder like a secure dropbox, Google drive or icloud” – James, 38

Users don’t want further in store assistance
“I would not want further assistance, I would want to sit at home and look through it all and how it is displayed and things” – Emma, 41

Understanding of the service: Confusion points

Some users were confused as to what point they are now considered verified.
Within phase one 3 out of 8 users thought they were verified when leaving the store.

“I thought they might verify them in store. It did not really bother me though because it was a quick in store process and that was good” – Evangeline, 35

Within phase two, this was made clearer in the email from the IDP so users were no longer confused about being verified in store.

Users were sometimes confused as to what the next steps were
Users that were confused often did not feel panicked by this as they were just waiting for the email and assumed that would tell them what to do next. There was confusion about how the verified documents were then seen by SecureIdentity.

“I would log into my ArkHive account and setup the password and then I would be sharing the scanned documents with the person who wanted them in the first place so that is SecureIdentity.” – James, 38
The in store environment

Users were often pleasantly surprised to come to a high street store. Users often commented that they would have expected to go to a post office or a governmental building like a town hall. They were happy that it was an easy local location.

The users felt they had privacy in ArkHive

"I like the fact that when you get your details out it’s around the corner in the shop and the ID photo taken is out of the line of sight from the street which is comforting" – John, 36
“I like the fact that when you get your details out it’s around the corner in the shop and the ID photo taken is out of the line of sight from the street which is comforting” – John, 36

**SNOOK 1 THE IN STORE ENVIRONMENT**

**Users felt they had less privacy in Max Spielmann**

“Probably I expected it to be more formal….I guess the ‘Photo shop’ setting was not what I expected. I expected a bank or a council office” – Hazel, 45
Recommendations

Users want to know exactly how they are verified

Users want more information and want to know how the documents are verified. Many users thought that the verification process was based mainly on the facial recognition technology matching the in-store ID photo to the identification documents rather than the identification documents also being scanned to ensure they are legitimate.
Users need to build trust with the colleague

This trust could be further built by having online profiles of the Timpson colleague that you can be shown in the initial email or a ‘rate my service’ digital form.

Smaller things like ensuring the colleagues introduce who they are to the user when they first meet is important to building trust with the user.

Users need a private, secure and simple environment

The environment needs to be private for users to feel comfortable, this could mean a

 الأخير
Users need a private, secure and simple environment

The environment needs to be private for users to feel comfortable, this could mean a booth in some stores as this may be the only way to achieve this privacy.

Having a designated area upon the desk for the documents to go in was good, as this could further reassure the user.

The users are most comfortable when sitting down for this service. The use of a rounded table was mentioned by one user, he felt that sitting side by side did not allow you to connect with the colleague.

Brandling will be important to reassure the user

It will be important to have the ArkHive brand prominently situated in the locations that this service will be provided so that customers can understand where to go when in store.

Going forward with this service it would be reassuring for the user if there was a more direct link with GOV.UK Verify within the face-to-face service.
THANKS!
